

11.2 CONTEXT ANALYSIS

Objectives

- (a) To increase the value of site and context analysis and promote site specific design responses.
- (b) To ensure that development demonstrates an understanding of an appropriate response to the specific conditions of both the site and surrounds.
- (c) To identify the key contextual features and characteristics of the surrounding urban form to which the design should respond.
- (d) To ensure that the opportunities and constraints of a site are fully considered and incorporated into the design proposal.

Controls

11.2.1 Context Analysis

- (a) A Context Analysis is to include an analysis of the urban form including but not limited to the following:
 - (i) Urban structure - The relationship between buildings, spaces, infrastructure and connections, landform, topography and natural features.
 - (ii) Urban grain - The subdivision pattern, the scale and configuration of streets and lots, and the rhythm of buildings and spaces.
 - (iii) Density and Mix - The amount of development and the range of uses in relation to the site's location and size; and its accessibility and proximity to other uses.
 - (iv) Height and massing - The scale, arrangement, volume and shape of buildings in relation to humans, other buildings, structures, spaces, skylines and views.
 - (v) Building type - The building footprint, its layout, circulation and access, and its functional relationship to adjoining spaces and buildings.
 - (vi) Façade and interface - The relationship and expression of the external faces of the building, its rhythm and pattern of openings, expression of entries, corners and roofscape, setbacks and boundary treatments.
 - (vii) Details and materials - The techniques, craftsmanship and detail of building components, and how the proposed selection of materials relate to the context through colour, pattern and treatment of materials including durability, sustainability and contextual fit.
 - (viii) Streetscape and landscape - The surrounding built and natural context, including street elevation, building typologies and their spatial and locational characteristics, treatment of street/boundary interfaces, microclimate, ecology and biodiversity. Relate the analysis to how the proposed development contributes to the streetscape and landscape of the area.
 - (ix) Social and economic fabric - Non-physical aspects of urban form including the productive capacity and economy of the community, cultural and social factors such as health and wellbeing, and community interaction.
