

Annexure B5-3 Flood Impact Assessment Requirements

A Flood Impact Assessment (FIA) must be prepared by a professional engineer who specialises in hydraulic engineering. The FIA must be prepared in accordance with the relevant sections of this Chapter. The 20% AEP, 1% AEP and PMF flood events must be modelled to assess the impact on existing flood conditions of a proposed development to property, infrastructure and the environment. A FIA may be required for any type of development where the development occurs in the floodplain (i.e. situated within the Flood Planning Area). A FIA may also be required where the site in question is tagged as a Flood Control Lot as defined in the State Environmental Planning Policy (Exempt and Complying Development Codes State Environmental Planning Policy) for the purposes of the application of the State Environmental Planning Policy.

Unless it can be demonstrated that hydraulic modelling is not required, the FIA must be prepared using Council's TUFLOW model (note: a fee is payable for the TUFLOW model). Once engaged, the consultant must enter into a license agreement for the use of Council's flood model for the specific purpose of preparing the FA for the proposed development only

The FIA must address the following:

- Description of the Site (including existing stormwater drainage and local catchment characteristics) and details of the proposed development.
- Flood affectation to the Site during the 5% AEP, 1% AEP and PMF events under existing (i.e. pre-development) conditions.
- Overview of the Flood Risk Precinct and associated development controls applicable to the Site
- Flood affectation to the Site during the 5% AEP, 1% AEP and PMF events under post-development conditions.
- Overview of the change in flood conditions associated with the proposed development.
- Discussion of adherence to applicable planning controls.
- Proposed mitigation measures to address any impacts or minimise risk to personal safety of occupants and the risk of property damage.
- A flood evacuation strategy (Flood Emergency Response Plan) (if required).
- On site response plan to minimise flood damage and provide adequate storage areas for hazardous materials and valuable goods above the flood level (if required).
- The architectural/engineering plans on which the assessment is based.
- Supporting calculations and mapping.
- The professional qualifications and experience of the author(s).
