

1.1 HEIGHT

The WLEP outlines the maximum permissible building height of a site. Achieving the maximum building height may not be appropriate in all cases and should not be considered as prescribed or allowable regardless of circumstance. Amenity or streetscape impacts may require a lower height or additional setbacks. Nothing in this part restricts Council's ability to require the height of a building to be less than the maximum height as specified in the LEP.

Objectives

- (a) To provide appropriate building heights for flat or pitched roof forms for lower density residential accommodation.
- (b) To ensure the height and scale of development relates to the topography and street character.
- (c) To ensure the height and scale of development does not unreasonably impact on views enjoyed by neighbouring and nearby properties.
- (d) To ensure that the height and scale of development does not result in unreasonable overshadowing of neighbouring and nearby properties.
- (e) To minimise loss of views from, and overshadowing of, public places.
- (f) To ensure development in excavation areas does not add to the overall visual bulk of the dwelling.

Controls

- (a) For a building with a pitched roof the maximum wall height is 7m above existing ground level (refer to Figures 4 and 5), except as determined in Control (b) below.
- (b) For a building with a flat roof, the maximum wall height is 7.5m above existing ground level.
- (c) Where it is permissible for buildings to be built to a height greater than 9.5m under WLEP, the wall height will be determined by a merit assessment of the design of the building and its relationship to adjoining dwellings.
- (d) Buildings on steep sites are to be stepped down to avoid high columns, elevated platforms and large undercroft areas.
