

1.2 SETBACKS

Objectives

- (a) To ensure that the bulk and appearance of the proposed development is appropriate to the streetscape.
- (b) To set a rhythm and character to residential streets.
- (c) To ensure the distance between buildings on adjacent properties allows adequate solar access, ventilation and privacy.
- (d) To ensure that the amenity of rear yards, their function as private open space, and their visual and landscape contribution to the surrounding area is protected and enhanced.
- (e) To accommodate flexibility in the siting of buildings, where appropriate.
- (f) To ensure the front and rear setbacks of buildings are consistent with surrounding buildings and do not visually detract from the streetscape.
- (g) To ensure significant views and view corridors available from the public domain and existing properties are considered as part of the local context of any development. Refer to *Part C1.10 Views*.
- (h) To ensure buildings on corner lots are consistent with the predominant building lines of adjoining sites.

Controls

1.2.1 Front and rear building lines

- (a) New buildings and extensions to existing buildings are to extend no further than the front and rear predominant building lines (refer to Figures 6 and 7). The predominant building line can be considered to be the three adjacent neighbours on either side.
- (b) The predominant rear building line is determined separately for each floor level. Notwithstanding (a) above, development at first floor level and above shall be set back from the rear building line of the ground floor level in order to minimise bulk and scale impacts and provide visual relief for the open space and living areas at adjacent properties (refer to Figure 6).
- (c) The siting of dwellings on corner lots should take reference from the setbacks of dwellings on adjacent sites.
- (d) Where it is proposed to build beyond the predominant front and/or rear building line at any level, or where there is no predominant front and/or rear building line, or where it is not possible to setback from the rear building line at first floor level, then greater consideration must be given to the following;
 - (i) Compliance with applicable development standards, including Floor Space Ratio and Building Height;
 - (ii) Compliance with the landscaped and open space controls;
 - (iii) Compliance with side setback controls;
 - (iv) Emergence of a new front and/or rear building alignment beyond the dwellings either side of the subject site (note that any reliance on an emerging front and/or rear building alignment as a precedent can only be justified where the emerging alignment is itself based on compliant development with respect to building height, FSR and side setback controls);
 - (v) Location and retention of existing significant vegetation;
