

1.6 SOLAR ACCESS**Objectives**

- (a) To maximise solar access to surrounding properties and the proposed development through appropriate orientation and siting.
- (b) To ensure reasonable levels of direct sunlight to living areas and private open space of lower density residential accommodation.
- (c) To maximise solar amenity and energy efficiency to existing surrounding lower density residential accommodation.
- (d) To minimise overshadowing of windows to internal living areas and private open space of surrounding dwellings.

Controls

- (a) Development is to be designed so as to provide for a minimum of 3 hours direct sunlight to at least 50% of the proposed living areas and principal private open space areas, when measured between 9am and 3pm during winter solstice (June 21).
- (b) Development is not to reduce the amount of direct sunlight to at least 50% of the principal private open space of adjoining properties to less than 3 hours when measured between 9am and 3pm during winter solstice (June 21).
- (c) Despite controls (a) & (b) above, where a development does not comply with a development standard and causes a reduction in direct sunlight to adjoining properties, *any* reduction may be considered unacceptable.
- (d) If the provision of direct sunlight is already below 3 hours (as per above), any reduction may be unacceptable.
- (e) Development is to avoid the unreasonable overshadowing of solar collectors on a nearby property.
