

1.8 CAR PARKING

Objectives

- (a) To provide convenient and accessible parking that is appropriately designed and located.
- (b) To achieve a high standard of urban design and retain the visual quality of lower density residential accommodation, streetscapes and landscapes.
- (c) To protect the amenity and safety of pedestrians.
- (d) To ensure that car parking accommodation does not dominate or adversely impact on the existing built or landscape character of the street.
- (e) To encourage the use of alternative modes of transport in areas well serviced by public transport.
- (f) To ensure on-street parking supply is protected by minimising impacts of additional vehicular kerb crossings.

Controls

1.8.1 Design Approach

- (a) Approval for on-site parking will only be granted where the site and locality conditions permit.
- (b) Car parking must be designed to complement the design of the building and streetscape to which it relates and incorporate a range of appropriate materials and design.
- (c) Car parking structures are to be located behind the front building line to reduce visual impact upon the streetscape.
- (d) Driveways and vehicular access should be designed to minimise the loss of on-street parking wherever possible.
- (e) Access to car parking and car parking structures are to be provided from secondary streets or lanes where possible.

1.8.2 Parking Rates

- (a) Development is to comply with the provisions of Table 4 in *Part B7 Transport*.
- (b) Notwithstanding the above, a reduced rate (or no parking) may be required in the following circumstances, where:
 - (i) Parking may have a detrimental impact on the character of the streetscape, heritage item or heritage conservation area, or health of a significant tree.
 - (ii) A driveway cannot comply with maximum gradients and design standards required by the Australian Standards.
 - (iii) Vehicle entry and exit may have a detrimental impact on pedestrian and traffic movements and safety or nearby services or infrastructure.
 - (iv) The access to the on-site car parking will result in the loss of more than 1 on-street car parking space or equivalent available kerb space, as measured cumulatively along the entire block.
 - (v) The streetscape has limited existing off-street vehicular access and/or consists of a narrow carriageway that does not facilitate efficient
