

2.7 FENCES AND WALLS**Objectives**

- (a) To define boundaries between communal and private areas within the site and to provide privacy and security for the development.
- (b) To promote a cohesive streetscape.
- (c) To ensure fencing contributes positively to the streetscape or adjoining park.
- (d) To ensure boundary treatments of properties adjoining parks are consistent with the materials palette in the relevant plan of management to maintain the amenity of parks.

Controls

- (a) Front fences are to be provided where it is a predominant character of the street frontage within a street block.
- (b) Front fences must not exceed 1.2m in height. On sloping sites, the height is averaged so that fences step down the street.
- (c) Front fences must have a maximum proportion of two thirds solid to one third open design.
- (d) Council may permit front fences up to a height of 1.8m of solid material provided it can be shown that the fence acts as an effective noise barrier as a result of adjoining a street with high traffic volume. Such fences are to be setback from the boundary to allow landscaping to soften the bulk or the structure is to be articulated as an alternative to a solid blank wall.
- (e) Rear and side fences behind the building line must not exceed 1.8m in height.
- (f) Side fences must taper down from the front building line to the front boundary fence.
- (g) Fences are to respond to the architectural character of the street in terms of materials used, predominant height, vertical/horizontal rhythm and predominant setback.
- (h) Fences are to clearly delineate between public, communal and private areas.
- (i) Fencing is to be designed so that sightlines between pedestrians and vehicles exiting the site are not obscured and gates do not open over the public roadway or footpath or into parks.
- (j) All boundary treatments for properties adjoining parks are consistent with the material palette from the relevant plan of management.
- (k) The design of fences should generally relate to the period and architectural style of building and help to integrate development into the existing streetscape.
