

2.19 ACOUSTIC PRIVACY

Acoustic privacy is a measure of sound insulation between dwellings and between external and internal spaces. Designing for acoustic privacy relates to the location and separation of buildings within a development and the arrangement of dwellings and internal spaces within dwellings.

Objective

- (a) To ensure a high level of amenity for residents.
- (b) To effectively manage the interface between non-residential uses and residential accommodation.

Controls

- (a) Soundproofing of all dwelling units by such means as acoustic glazing is required to reduce noise impacts on residents.
- (b) Minimise noise transmission between dwellings by:
 - (i) Locating noisy and quieter areas next to other noisy or quiet areas, e.g. living rooms adjacent to living rooms, and bedrooms adjacent to bedrooms.
 - (ii) Using storage or circulation zones within an dwelling to buffer noise from adjacent dwellings, mechanical services or corridors and lobby areas and minimising the amount of party (shared) walls with other dwellings.
