

- (d) Analysis of the wind effects must be based on measurements taken from an adequate number of locations, covering all the potentially affected areas. For each of the locations, wind speed measurements should be taken from a minimum of 16 wind directions. Initial tests to be performed without the effect of the proposed trees or other wind mitigation devices.
- (e) Analysis of results must be based on reliable meteorological data for Sydney (preferably from the Sydney Airport Observation office), taken over a minimum of 30 years of continuous data. In the case where treatments are required, their effectiveness must be confirmed with further wind tunnel measurements.
