

B4 COASTAL RISK MANAGEMENT

Coastal risks include risks from erosion, inundation and geotechnical instability. Erosion refers to the wearing away of the land by the action of natural forces. Coastal or tidal inundation is the flooding of coastal lands by ocean waters, which is generally caused by large waves and elevated water associated with severe storms and the peak of the high tide. Geotechnical risks in the coastal zone refer to coastal cliff or slope instability.

This part refers to land identified in the 'Geotechnical Risk' or 'Coastal Inundation' Layers on Council's mapping website.

	Coastal Inundation

Any application for new buildings, significant alterations and/or additions to existing buildings and/or new swimming pools on properties identified as affected by 'Coastal Inundation' or 'Geotechnical Risk' are required to submit the following with a development application (refer to the *Waverley Development Application Guide*):

- (a) Coastal Risk Assessment; and/or
- (b) Geotechnical Risk Assessment.

Refer to Council's *Coastal Risk Management Policy 2012* for further information
