

The NSW State Government defines the 'Floodplain' as '*land susceptible to flooding by the PMF (probable maximum flood) event*'. The document also defines 'flood' as natural phenomena where water inundates land that is usually dry, generally due to weather systems that generate a high amount of rainfall. Flooding can be due to water flowing within, out of, or towards a waterway. Water that runs towards a watercourse is known as an overland flow and this type of flooding is the predominant type of flooding that occurs throughout the Waverley Local Government Area.

For the purposes of insurance most of the water where inundation could occur, aside from Bronte Gully and Tamarama Gully, in the Waverley LGA should be considered as 'stormwater'.

Sections 5.2.1-5.2.8 apply to land identified in the 'Flood Planning Area' layer on Council's mapping website and in annexure B5-4. These Flood Planning Areas cumulatively represent the Flood Planning Area referred to in clause 5.21 of Waverley LEP 2012.

Section 5.2.9 provides controls for all other development.

There are three different levels of potential flood risk associated with the Flood Planning Area, high, medium and low, see below.

Table 1 Flood Risk Precinct Definitions

Flood Risk Precinct	Description	Technical Definition
High	Land within the 1% AEP flood extent with a high hydraulic hazard classification. There is a high potential for damage to property, risk to life or evacuation difficulty. <i>In this precinct there would be a significant risk of flood damages without compliance with flood related building and planning controls.</i>	Land classified as "H4-H6" in the 1% AEP event.
Medium	Land below the 1% AEP flood that is not subject to high hydraulic hazard and where there are no significant evacuation difficulties. <i>Note: in this precinct there would still be significant risk of flood damage, but these damages can be minimised by the application of appropriate development controls</i>	Land classified as "H1-H3" in the 1% AEP event.
Low	All other land within the floodplain (i.e.. within the extent of the Probable Maximum Flood (PMF), that is not classified as a High or Medium Flood Risk Precinct. <i>Note: The Low Flood Risk Precinct is where the risk of damages is low for most land uses. The Low Flood Risk Category is the area above the 1% AEP flood.</i>	Flood affected land between the PMF and 1% AEP extent.
