

Notes:

1. *Where sufficient information is not available, but the potential for flood risk issues are evident based on available information, applicants may be required to undertake a site specific flood assessment. These situations include where:*
 - a) *Council has knowledge that the property has been previously affected by or impacted upon flooding or an overland flow path;*
 - b) *The property is on the low side of the road and/or the boundary levels are below the level of Council's kerb;*
 - c) *The property is lower than surrounding properties;*
 - d) *The property is in a natural low point, gully or depression; or*
 - e) *The property is adjacent to or contains a flow path, open channel, watercourse or drainage line.*

The assessment would determine the Flood Risk Categories in order to apply appropriate controls in addition to any further assessments required by this Development Control Plan.
2. *Technical definitions for Flood Risk Precincts as outlined in Table 1 are defined by the relevant flood events in the governing study, which is the most recently endorsed Council Flood Study or Flood Risk Management Study and Plan.*
