

Planning Controls Matrix for Flood Planning

The Planning Controls Matrix identifies the prescriptive flood related development controls that apply to the Flood Planning Areas and land use category. Refer to Annexure B5-1 for explanations of each land use category.

Key

No controls	
Subject to significant flood constraints (refer to General Note 1)	
DCP Control Reference no.	1

General Notes:

- Significantly Constrained Land:** Where development types are likely to be incompatible with the hazards existing within the nominated part of the floodplain without substantial mitigation measures. Consequently, the development may be found unacceptable unless the design of the development together with the mitigation measures can address any potential unacceptable amenity or environmental impacts. Alternatively, this may require a reduction in the otherwise anticipated development intensity for the land.
- Filling:** Filling of a site, or site modification works in general, that is partially affected by flooding (if acceptable to Council) may change the flood risk precinct, and the associated development controls that apply to development on the site.
- Multiple FRPs:** Development controls relate to the FRP identified for the site. Where a site has two or more FRPs the relevant sets of controls apply to each risk precinct but for practical purposes the stricter controls would normally apply across the whole development.
