

B6 ACCESSIBILITY AND ADAPTABILITY

This section applies to all development excluding dwelling houses and other low-density residential development.

Livable Housing Design Guidelines

Livable Housing Australia drives industry best practice through the *Livable Housing Design Guidelines*. A livable home is designed and built to meet the changing needs of occupants across their lifetime. Livable homes include key easy living features that make them easier and safer to use for all occupants including: people with disability, ageing Australians, people with temporary injuries, and families with young children.

Disability Discrimination Act 1992 (DDA 1992)

The *DDA 1992* makes it unlawful to discriminate against a person with a disability in regards to the provision of access to public buildings for the provision of goods and services, accommodation and employment unless this would cause 'unjustifiable hardship'.

Where an applicant believes that complying with the DCP would cause "unjustifiable hardship," or detract from the significance of a Heritage Item, an application can be made to be exempted from a particular provision or to provide access for people with disabilities in some other way than provided for in the DCP. It is the responsibility of the applicant to ensure that the development meets the requirements of the *DDA 1992*.

Access to Premises - Australian Standards

Access to Premises - Australian Standards provides the technical specifications for access design requirements in the built environment. The Australian Standards clarify the accessibility requirements for premises as implied under the *DDA 1992* and are incorporated within the National Construction Code (NCC).
